

GL ShipManager

Interested in better, safer data management and cost-conscious data transfer?

Basic System

- Data Transfer
- Contacts
- Forms
- General Data
- User Management
- GL Contact Finder
- Task Management

GL ShipManager – Basic System is the core of the GL ShipManager system around which all of the other modules function. The unique and convenient way in which GL ShipManager synchronizes onboard and office data makes it the ideal ship management solution. Likewise, the integration of standard forms as well as the shipping company's own forms simplifies work.

Basic System manages contact information for all companies and individuals who figure in to your operational processes. Additionally, the GL Contact Finder provides worldwide contact information for the GL (Germanischer Lloyd) classification society.

Basic System is characterized by the same ease of use and efficiency that makes all GL ShipManager modules so popular

- Easy export and import of data from the office to individual ships and vice-versa in order to update and synchronize the local databases
- Unique ability to ensure sufficient data replication while transferring only small volumes of data, significantly reducing communication costs
- Seamless communication with all other GL ShipManager modules

GL ShipManager – Basic System ensures the utmost security and integrity of your data

- Data are encoded and exchanged to and from vessels error-free via reliable and stable transmission channels
- Technically sophisticated access management procedures ensure no unauthorized persons have access to the system
- Simple and safe recovery function to restore data in the case of partial or total data loss
- A comprehensive user management function administers customizable reading and writing privileges for system users in the office and onboard ship
