

# GL ShipManager

Interested in making compliance with industry requirements and international regulations significantly easier?

## Compliance Management

- Incident Management
- Documentation
- Certificates / Q88 Interface
- Surveys / Fleet Online

The shipping industry is regulated by requirements and regulations, such as those defined by ISM Code, ISO, SOLAS, TMSA, classification societies, vetting inspections by oil companies, or Port State Control.

The associated administrative work involved in complying with such rules and regulations can often be burdensome.

**GL ShipManager – Compliance Management** supports management processes and significantly reduces the administrative burden, making it easier and more cost-efficient to ensure compliance while simultaneously achieving a higher level of safety on your ships.

## Safety and quality management processes

ISM Code requirements are represented in the GL ShipManager system. The system makes processes more transparent and manages information more effectively to significantly support the development, implementation and documentation of your safety and quality management systems.

## Incident management

A workflow-oriented tool for the recording, analyzing, and documenting of incidents and occurrences including the resulting actions taken, also enabling the easy generation of reports. Efficiently analyze an occurrence, identify the causes, and determine what courses of action to take to improve processes and prevent a recurrence, all the while documenting the entire process.

## Crew and vessel compliance

Easily administer crew profiles for various ship types to ensure that the respective manning configuration fulfills all necessary requirements such as those of IMO, ISO and STCW. Certificates and documents are intelligently managed. An interface to GL's Fleet Online information system provides ship owners and managers with quick access to the complete survey status of their GL classed fleet.
