

GL ShipManager

Streamline operations, analyse processes and costs, simplify administrative tasks, manage information more effectively

GL ShipManager is one of the few ship / fleet management software systems for the maritime industry supported by a leading international classification society.

As a GL (Germanischer Lloyd) group company, we are able to successfully combine the competence of our software developers, the expertise of experienced maritime professionals and knowledge of market and customer requirements.

This means the highest degree of investment protection for our customers.

GL ShipManager is characterized by its flexibility, intuitiveness, and ease of use. Toolbar icons and selection menus facilitate navigation, minimize manual data entry, and increase end-user acceptance.

Information is managed more efficiently and is quickly and easily accessible on demand. With the benefit of one-time, non-redundant data recording, data are centrally maintained and made available across the other functions and modules. The resulting streamlining of operations spans all functions of the company – on shore and at sea – allowing the company to operate more efficiently, with reduced costs and increased profitability.

Key Benefits

- Increase efficiency of shipping operations
- Optimize processes
- Ensure compliance with industry requirements and international regulations
- Achieve higher TMSA results
- Save costs
- Reduce workload and ease administrative tasks
- Create flexible reports and analyse key figures on demand
