

GL ShipManager

Interested in analysing costs and operations quickly and easily with a high-performance, highly flexible tool?

Reporting & Analysing

- Report Generator
- Ad-hoc Analysing
- Trends

Access to key business data is vital to timely and effective decision making.

GL ShipManager – Reporting & Analysing is fully integrated with all other modules of the system to collect data on various operational processes (purchasing, maintenance, repairs, stock keeping, etc.), structure the data accordingly, and generate reports that provide you with the information you need to make strategic decisions. Furthermore, GL ShipManager uses a separate database for its comprehensive Reporting & Analysing functionality so that the active use of the system database is in no way impeded.

Increase your business intelligence

GL ShipManager facilitates operational fleet management by providing a powerful tool to analyse, evaluate the efficiency of, and optimize costs and processes. Reporting & Analysing offers a comprehensive array of standard reports combined with the flexibility of ad-hoc reporting. The user is able to easily create his/her own reports and analyse key figures on demand.

Give the right people access to the right information

GL ShipManager's intelligent User Management provides customizable reading and writing privileges. Different users with different objectives can create reports for different target groups – but only to the extent to which each user's pre-configured authorization allows. Viewing privileges of each report generated can be restricted to specified users or user groups to ensure that no unauthorized persons have access to key figures and data.
