

GL ShipManager

Interested in increasing safety, reliability and predictability of your shipping operations?

Technical Management

- Planned Maintenance
- Repairs
- Technical Documentation

GL ShipManager – Technical Management simplifies the management of equipment and technical procedures. The system takes over the complex task of continually monitoring all technical and equipment-related actions involved in complying with class society or safety code maintenance regulations.

A Planned Maintenance System (PMS) streamlines the planning, documentation and implementation of maintenance work and surveys onboard ship. Maintenance work can be regularly planned and supervised in line with each component's lifetime, and recognized by the class society as part of its periodic surveys.

GL ShipManager – Technical Management provides you with a higher degree of:

Intelligence

- Know the maintenance status of any of the thousands of ship's technical components at all times.
- Plan and supervise maintenance work in line with each component's lifetime.
- Manage technical documentation and certificates as well as documentation of maintenance and repair work more effectively.
- Group equipment, components and parts intelligently in customizable equipment hierarchies.

Efficiency

- Gain more control of maintenance work and replacement part procurement.
- Simplify and better coordinate class surveys.
- Free onboard engineers and office personnel from otherwise time-consuming, administrative tasks.
- Reduce maintenance-induced downtime and dry-dock time.
- Copy equipment and maintenance profiles easily to other ships of the same type.

Safety and predictability

- Ensure compliance with all regulations and benchmarks of technical relevance.
- Gain a long-term view of the maintenance schedule.
- Maintain an easy overview of deadlines and tasks through the use of symbols and color coding to show approaching and overdue maintenance task deadlines, and to differentiate between safety and class relevant maintenance tasks.
